Revision-proof Data Import

ProDOK NG is a modern I&C-CAE system with standardized interfaces for intelligent data import. Reality in the process industry is heterogeneous, and consequently so are software solutions. With the help of ProDOK NG you can overcome communication barriers in the heterogeneous system landscape.

One major focus here is on revision-proof data exchange. Generally a great number of software tools are used in the engineering, construction and commissioning of a plant. In the course of the whole planning process, all these tools deliver data relevant for documentation, which need to be passed on to the I&C-CAE system.

Data import from the following trades and systems:

- 2D-plant engineering
- 3D-plant engineering
- Calculation: inline devices
- Procurement
- Document management
- Maintenance planning
- Microsoft Office
- Assembly and installation planning
- DCS engineering
- Simulation
- Process technology

Your Advantage

- Shorter planning phases
- Enormous time savings
- Enables simple retrofitting
- Usual industrial standards
- Various revision stages are differentiated
- Fast, simple resolution of discrepancies, thanks to a specially-developed tool
- Filter functions give a clear overview
- Color visualization enables very fast recognition of changes
- Choice of settings for data import: whole sub-areas or individual data fields
- Logging of import procedures
- Provides decision basis for
- Claim management

In Brief:

Thanks to revision-proof data import with ProDOK NG, the data from many different systems and trades can be brought together. The benefit for you: data exchange data becomes very simple, both with internal and external partners. Since you no longer have to enter data manually in the CAE system, you save a lot of time, plus data quality is improved. You can also implement the best software solution for each individual trade, while exchanging data transparently between the systems. Revision-proof data import guarantees you consistent data and an effective engineering process.
